Aryan Duhan

+91-8307253057 aryan.duhan2203@gmail.com linkedin github

Summary

Final-year CSE student with hands-on experience in full-stack development and cloud deployment. Skilled in C/C++,JavaScript, TypeScript, SQL, React.js, Next.js, and Node.js. Solved 300+ LeetCode problems and built scalable, secure, real-time applications.

Experience

Delaine Technologies Pvt. Ltd. On-site

Intern *May 2026 – June 2026*

- Built a secure Admin Blog Management System with Supabase RPC-based authentication, ReactQuill editor, and dynamic CRUD operations, enabling real-time content publishing without redeployment.
- Developed a multilingual corporate landing platform (Next.js 15, TypeScript, i18n, SSG, GA4) with auto-detecting English/Dutch localization for a client's international audience.
- Delivered frontend implementation for a healthcare tourism platform (Next.js, TypeScript), incorporating direct client feedback to iteratively refine UI/UX and align with business requirements.

Projects

QuickDine | *GitHub*

Full-Stack Food Ordering & Delivery Platform *Tech Stack: Next.js, React, Supabase, Razorpay, Docker, AWS*

- Built a full-stack food delivery platform with a 5-stage order lifecycle, real-time push notifications (OneSignal), Kanban-style restaurant dashboard, and driver earnings tracker using Supabase real-time replication.
- Deployed on AWS EC2 with Docker, Nginx, and Elastic IP; integrated S3, Lambda presigned URLs via API Gateway, SQS with Dead Letter Queue, and Razorpay checkout with HMAC-SHA256 verification.

Skill Bridge Platform | *GitHub*

Mentorship & Career Development Platform *Tech Stack: React, TypeScript, Node.js, Express, MongoDB*

- Developed a mentorship platform connecting students with industry professionals using role-based access control, JWT authentication, and bcrypt password hashing.
- Implemented real-time messaging via WebSockets (Socket.io), email verification, and mentorship request workflows with React Query for optimized data fetching.

Predictive Maintenance of Military Engines | *GitHub*

AI-Based Equipment Life Prediction *Tool: Python, Jupyter Notebook, Scikit-learn*

- Built a predictive maintenance system estimating Remaining Useful Life (RUL) of military turbofan engines using Random Forest regression achieving R^2 of 0.70 and MAE of 26.66.
- Performed EDA and feature selection on 21+ sensor inputs with preprocessing pipelines including scaling, label generation, and correlation analysis.

Achievements

Full Stack Development Hackathon (VIT Chennai): Ranked Top 8 out of 100+ competing teams, building a full-stack solution with real-time features and cloud deployment under 24 hours.
Algorithmic Problem Solving (LeetCode): Solved 300+ problems across arrays, trees, graphs, and dynamic programming with focus on optimized time/space complexity.

Education

Vellore Institute of Technology, Chennai Aug 2023 – Present

B.Tech in Computer Science and Engineering (CPS) *CGPA: 8.33*

- **Relevant Coursework:** Data Structures Algorithms, OOPS,DBMS, Computer Networks, Operating Systems

Technical Skills

Languages:C, C++, Python, JavaScript, TypeScript, SQL,
Frontend: React.js, Next.js, HTML/CSS, Tailwind CSS
Backend & Databases: Node.js, Express.js,RESTful APIs, PostgreSQL (Supabase), MongoDB
Tools & Concepts: Git, GitHub, Postman, PM2, Payment Gateways (Razorpay), JWT Authentication
